

Dear all,

Attached please find the slides and graphics which I will use in my lecture on nonlinear signal analysis in the BENESCO series. I propose you to bring printouts of the slides and graphs to the lecture. In the lecture I will show the slides and graphs. You can then comment your printouts with handwritten notes.

The graphs are only meant as sketches of what you will see in the lecture. They are not meant as high quality figures. They do not have figure captions, and the quality of some of the vector graphics might be low in the PDF file. I only send them to you since this allows you to take your notes next to the printed graphs. You will not need to draw them by hand.

Looking forward to the lecture,

Kind regards, Ralph Andrzejak
